

**Absolutely the Safest, Simplest
and Most Cost Effective Fabric
Container Installing Machine Made!**

Pays For Itself In Its First Week

Aids In The Enhancement Of Your Soil
Through Mixing, Amending, and Aeration

Operates Almost Anywhere And In
Almost Any Soil Type

Up to 6 Times Faster Than
Standard Augers

Operates With A 2-3 Person Crew

Extremely Low Maintenance

Operates Consistently Without
Regular Adjustments

Dependable And Long Lasting

Currently Available In
14", 18", 21", 24", 30", & 36" Sizes

Patent #10,781,637

MONARCH AUGERS

PATENT # 10,781,637

The patented **Monarch Auger** is the best tool for installing in-ground fabric containers and growbags!

The patented **Monarch Auger** is also very useful as a construction tool, aiding in all types of pole installations.

Solves the #1 reason why growers choose not to use 'fabric containers'/ growbags (high upfront installation costs).

Absolutely the Safest, Simplest, and Most Cost Effective Bag Installing Machine.

Uses existing hydraulic controls and functions present on skid steers and tractors.

Multiple models up to 36" have installed over 200,000 bags over the past 9 years (starting in 2014) WITHOUT any breakdowns.

Currently available in 14", 18", 21", 24", 30", and 36" sizes. Custom sizes available too; inquire within.

The **Monarch Auger** pays for itself within the first week of use with any size.

It provides the capability to enhance, incorporate, and amend your soil through additions of compost, lime, gypsum, fertilizer, organic matter, mycorrhizae, moisture retention agents, pesticides, etc. Further more, it aerates the soil during bag installation while mixing it to provide a uniform texture.

Using the **Monarch Auger**, beginner operators can expect to install 150-200/ 24" bags per 8 hr. day while experienced operators can expect to install 400-450/ 24" bags per 8 hr. day, proving it to be over 6 times faster than using a standard auger and back breaking shovel!

The **Monarch Auger** operates on most farm topography: flat or uneven ground and slopes, and on many soils such as sandy, loamy, clay, rocky, sticky to include dry, moist, and wet conditions. It is very useful as a construction tool where soil needs to be removed from auger holes, and operates consistently without regular adjustments on extremely low maintenance. It can easily accommodate sizes up to 36" with quick setup and change over between sizes.

Maximize your efficiency by using the Monarch Augers Fiberglass Cone d Sleeves.

Beginner operators can expect to install 150-200/ 24" bags per 8 hr. day while experienced operators can expect to install 400-450/ 24" per 8 hr. day.
